Hinze-scale estimate: $\nu = (7 - 3D_s)/5$
spectral closure, $\ell_{\text{in}} = \ell_\sigma$: $\nu = 3 - D_s$
spectral closure, $\ell_{\text{in}} = \ell_H$: $\nu = \frac{6}{5}(3 - D_s)$
complete self-similarity: $\nu = 2$
simulations at equal h: $\nu \approx 1$
$D_s = 7/3$
Exponent ν in $(\ell_\sigma/h)^\nu$ [-]
